(54) Title: METHOD FOR THE CONSTRUCTION OF RANDOMIZED GENE SEQUENCE LIBRARIES IN CELLS

(57) Abstract: An *in vivo* method for the construction of ran-
domized gene libraries and/or domain replacement in gene li-
braries by homologous recombination using a *Kluyveromyces*
lactis killer toxin, in particular the (γ-subunit of the *K. lactis*
killer toxin, as negative selection marker is described. The use
of the (γ-subunit of *K. lactis* as negative selectable marker in-
creases the percentage of randomized clones.
